EXAMINER

RUDDOCK, ULA CORINNA

ART UNIT	PAPER NUMBER
----------	--------------

1771

DATE MAILED: 09/10/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/648,906

Applicant(s)

BOHANNON, GERALD DAVIS

Examiner

Ula C Ruddock

Art Unit

1771

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on 02 July 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) 1,4-7 and 9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) 1, 4-7, and 9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 2, 2003, has been entered.
2. The Examiner has carefully considered Applicant's amendments and accompanying remarks filed July 2, 2003.
3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. Claims 1, 4-7, and 9 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Romanek et al. (US 5,358,356) in view of Jacobsen, Jr. et al. (US 5,330,828), Molnar et al. (US 5,507,845), and Nosker et al. (US 5,789,477). Romanek et al. disclose an erosion control mat formed of a scrim having a lightweight web secured thereto (abstract). The lightweight web is preferably made up of unconsolidated fibers, which means that the fibers are not secured to one another (col 3, ln 25-27) and would inherently have some thickness. Applicant's filler is made of randomly dispersed loose fiber fill (page 10, line 1 of the present Application). Therefore, it should be noted that the Examiner is equating Romanek's lightweight web to the three-dimensional synthetic filler of the present

Art Unit: 1771

Application. The lightweight web can be made of polyester fibers (col 3, ln 3-6). With regard to claim 9 of the present invention, UV stabilizers may be added to the materials making up the scrim and the web (col 4, ln 2-5). The final composite fabric formed of the scrim and lightweight web can be colored (col 3, ln 64-66). Romanek et al. fail to teach a second netting material, that the polyester fibers are crimped, and that the polyester is substantially recycled polyethylene terephthalate made of green soda bottle material. Romanek et al. also fail to teach that the filler material has a resistance to compression value of about 0.210 to about 0.285 psi/gram of fiber and a percent recovery value of at least 90% following the application of a 0.5 psi compressive load for a period of 5 minutes.

Jacobsen, Jr. et al. (US 5,330,828) disclose a fiber mat which can be used as an erosion control device (col 1, ln 10-11). The fibrous mat can be produced with netting on one or both sides (col 7, ln 52-54). It would have been obvious to one having ordinary skill in the art to have employed Jacobsen's disclosure of a second netting on the erosion control mat of Romanek et al., motivated by the desire to obtain a mat with increased product strength.

Molnar et al. disclose plant sod mats that are especially effective for soil stabilization (abstract). The sod mat comprises a sod reinforcement and stable discrete fibers (col 3, ln 57-59). The discrete fibers can be polyethylene terephthalate and can also be crimped (col 13, ln 55-67). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have used Molnar's crimped polyethylene

Art Unit: 1771

terephthalate fibers in the erosion control mat of Romanek et al., motivated by the desire to obtain an erosion control mat with increased root entanglement.

Nosker et al. disclose a composite building material from recycled materials (abstract). The polymer component can be composed of recycled PET (i.e. polyethylene terephthalate) from soda bottles (col 4, ln 47-55). With regard to claim 1 and 4, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have used the recycled PET of Nosker et al. as the polyester in the filler material of the erosion control mat of Romanek et al. motivated by the desire to reduce the amount of material that is incinerated or sent to a landfill. Furthermore, it should be noted that Romanek et al. disclose that the scrim and lightweight web can be colored (col 3, ln 64-66). While Nosker et al. fail to specifically disclose the use of recycled green PET soda bottles, it would have been obvious to have made Nosker's soda bottles green, motivated by the desire to reduce the amount of green soda materials that are incinerated or sent to a landfill and by the desire to obtain a colored erosion control mat.

Although the combination of Romanek et al, Jacobsen, Jr. et al., Molnar et al., and Nosker et al. fail to disclose that the filler material has a resistance to compression value of about 0.210 to about 0.285 psi/gram of fiber and a percent recovery value of at least 90% following the application of a 0.5 psi compressive load for a period of 5 minutes, it is reasonable to presume that said percent recovery value is inherent to the erosion control mat of Romanek et al, Jacobsen, Jr. et al., Molnar et al., and Nosker et al. Support for said presumption is found in the use of like materials, crimped polyester fibers secured to a

Art Unit: 1771

scrim. *In re Fitzgerald*, 205 USPQ 594. In addition, the presently claimed property of a resistance to compression value of about 0.210 to about 0.285 psi/gram of fiber and a percent recovery value of at least 90% following the application of a 0.5 psi compressive load for a period of 5 minutes would obviously have been present once the Romanek et al, Jacobsen, Jr. et al., Molnar et al., and Nosker et al. erosion control mat is provided. Note *In re Best*, 195 USPQ 433, footnote 4 (CCPA 1977).

Furthermore, in view of the newly added amendment, because Romanek's final composite fabric formed of the scrim and lightweight web can be colored (col 3,ln 64-66), it would have been obvious to have selected a color which would blend in with the surrounding area, motivated by the desire to create a blanket that is colored for esthetic purposes and that is camouflaged by the environment and not chewed up by birds or other animals.

Response to Arguments

5. Applicant's arguments filed July 2, 2003, have been fully considered but they are not persuasive for the reasons set forth. Applicant argues that none of the cited references disclose an erosion blanket comprising a netting material and a synthetic filler material having a color which tends to blend in with the surrounding area. This argument is not persuasive because as shown above, because Romanek's final composite fabric formed of the scrim and lightweight web can be colored (col 3,ln 64-66), it would have been obvious to have selected a color which would blend in with the surrounding area, motivated by the

Art Unit: 1771

desire to create a blanket that is colored for esthetic purposes and that is camouflaged by the environment and not chewed up by birds or other animals.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ula C Ruddock whose telephone number is 703-305-0066.

The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 703-308-2414. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
